

HOW DO I ACHIEVE BETTER HEALTH AND SAFETY COMPLIANCE FOR MY BUSINESS?

Implement SAP® Environment, Health and Safety Management with Oxygen Business Solutions

Critical Business Issue

Does your organisation suffer from these typical Environment, Health and Safety (EHS) problems?

- Current EHS systems not meeting legislative requirements
- EHS data 'hidden' throughout the organisation
- Lack of hard information on incidents, hazards or corrective actions
- Poor follow up on corrective actions
- Inconsistent EHS processes and data across the organisation

SAP and Oxygen for EHS

As a foundation for corporate sustainability initiatives, Oxygen's packaged EHS solution helps resolve these issues, overcoming the challenges of disconnected systems, regions and departments. Using SAP EHS allows an organisation to centralise the collection of EHS information and report successfully on the positive impact of its global strategies.

Adding to the functionality inherent in SAP EHS management, Oxygen's solution includes preconfigured document management, incident and hazard management workflows, and preconfigured analytic reports, all of which help get a standardised EHS reporting process up and running in as short a time as possible.

Oxygen's packaged EHS solution provides real time data and reduces reporting delays.

A UCCO COMPANY

THE BEST-RUN BUSINESSES RUN SAP™

Three Steps to Improved EHS data management

Step 1: Expert Roundtable

Oxygen visits on-site and discusses the processes necessary to establish an EHS solution. We use this opportunity to learn how the EHS system can be adapted to suit an organisation's unique health and safety issues.

Step 2: Maintenance Benchmark Workshop

Working in a collaborative forum with the customer, Oxygen stages a one-day workshop, to identify the current maturity level of EHS processes and understand where the value can be added through change to 'best practice' processes. We work with the customer to create a roadmap to move the organisation forward, at a pace that makes sense for its requirements, and in a sequence that will work.

- Document your "as is" and "to be" states
- Generate a long term roadmap for an organisation's EHS needs
- Identify business benefits that will support the business case to install the Oxygen EHS solution

Step 3: Fast Track Deployment

Oxygen's packaged SAP EHS solution can be deployed as an out-of-the-box installation covering all aspects of implementation from set-up to post go live support. Alternatively for existing SAP EHS customers, functionality can be cherry picked and added to the existing system.

Take advantage of Oxygen's Rapid Implementation Models

1. Dedicated partnership with SAP on environmental and health and safety value scenarios
2. Achieve positive impact to the bottom line via Oxygen's deep process and real world business experience
3. Complete end-to-end solution implementation with seamless integration
4. Strong program management, consulting and change management
5. Improve in-house expertise via knowledge sharing and training
6. Fixed scope, cost and timeline
7. Realize value quickly within six months

BENEFITS OF OXYGEN'S SAP SOLUTION

Oxygen's EHS solution offers the following benefits:

Quality System

- SAP EHS is an advanced, up-to-date management system
- SAP EHS is in synch with evolution of other SAP components

Accurate Information

- Simplified auditing via a single EHS data source
- Immediate access to EHS data
- Integration into other SAP modules including FI, HR, PM, MM & DMS

Better Reporting

- Simple, real time reporting on EHS statistics
- Immediate incident, hazard and risk assessment status reporting

Automated Notification

- Predefined notifications for incidents, hazards and safety measures
- Escalation for overdue tasks
